

BOND PANEL SHEET

Technical details

Architectural/Structural panel

Total Width	1215mm (47.83in)
Effective Width	1150mm (45.27in)
Standard Tile Length	350mm (13.77in)
Rise/Step	15mm (0.59in)
Minimum Length	75.50cm (29.7in)
Maximum Length	24'+(Limited with delivery)
Materials	Steel - Zinc coating [g / m ²] - min. 275
Finishes	Matte/Crinkle Look

General information

Our popular Bond (Scandinavian look) line is simple in form yet at the same time combines tradition with modernity. Uniquely, sculpted with beautiful lines, perfect geometry and shape. This perfectly embossed and fitting roofing panel with its playful refraction of light and shadows is what gives the roof a unique character, making it perfect choice roofing system on every building. The use and placement of special, almost invisible mounting screws makes the Bond roof looks elegant and exclusive.

characteristics

The Bond metal roof tiles are manufactured in 8 shades. Premium product that distinguishes itself by its 24 mm high profile. Due to its characteristics style and durability, this model is suitable for re-roofing as well as new constructions.

The innovative joining system is designed for roof tile modules to overlap on both sides, significantly simplifying the installation time resulting in savings with installation costs.

Bond profile is made and protected from 2 of the best coatings available. SSAB- Green Coat organic based sustainable coating, or ArcelorMittal - Granite Deep coating.

Advantages

Distinctive architectural profile with matte textured coating .The Bond roof tiles are made right here in Ontario from zinc-plated (Z275) G90 steel sheet with thicknesses 25 Gauge - 0.50MM

Bond Metal roof tiles can be manufactured in standard and special-order lengths. From 500 mm to 7000 mm.

Available with Drip stop- practical condensation felt protection on the underside of the sheet.

Dimensions, longitudinal section.
